BLUEBERRIES

**DELICIOUS
PROFITABLE
VERY ORNAMENTAL**

Our Blueberries are far superior to the wild Blueberry or Huckleberry. These Blueberries grow in large clusters of the most beautiful blue color, plump, tender and practically seedless. The flavor of these cultivated Blueberries is simply delicious. Bushes will grow to the height of 8 feet. The plant itself is very ornamental. During the summer the foliage is deep satiny green, and against this background hang clusters of berries royal in their magnificence. During autumn the leaves turn bronze, and during the winter months the twigs are red. Buds are pink and open to white, bell-shaped flowers. **Two plants** should be set out to insure cross pollination, so we would not advise to set just one plant. We are offering 2-year plants that will start to bear the second year. Blueberries like these sell for 55c and 70c per quart on retail markets.

Blueberries prefer an acid soil containing an abundance of peat or other partially rotted vegetable matter. They also need a moderate supply of moisture and good drainage. If your soil is not already acid this condition may be created easily by mixing with the surface soil a liberal quantity of peaty material such as acid peat, partially rotted leaves, pine needles, sawdust or chip dirt from an old wood pile. A surface mulch of leaves or straw each year is also beneficial to hold an even soil moisture. Acid phosphate at the rate of 300 lbs. per acre will help make soil acid. Write United States Department of Agriculture at Washington D. C., for bulletin on growing Cultivated Blueberries.

BLUEBERRY VARIETIES

We can supply Blueberries this year in the following varieties: Rubel, Harding, Rancocas, Jersey, Pioneer and Concord. We reserve the right to substitute if we happen to be out of one or the other, unless you specify NO SUBSTITUTION.

PIONEER. Plant vigorous, very productive, and hardy. Medium spreading habit of growth. Fruit large, firm, and of very good quality. Ripens midseason. Leaves turn dark red towards fall. Very ornamental. Called the Show Blueberry. Bears fruit in clusters.

CONCORD. Plant vigorous. Fruit is large and excellent quality. Upright grower. Bears fruit in clusters. Midseason.

RUBEL. One of the most vigorous growers, upright, very good grower, and the heaviest producers of them all. Fruit is large but a little tart. Good shipper. Leaves turn red in fall. Very ornamental. Fruit borne in clusters. Midseason.

RANCOCAS. Vigorous upright grower. Very productive. Fruit sweet and fine flavor. Ornamental. Fruit borne in clusters. Midseason to late.

HARDING. This is the sweetest of them all. Spreading bush. Very productive. Berries are a little too soft for long distance shipping, but fine for home use. Fruit not borne in clusters, but all over the bush. Late ripening season.

JERSEY. Upright grower, vigorous, and very productive. Largest fruit of good quality. Midseason to late.

Please Lend this Catalog to Your Neighbor

GEORGE STROMER

Garden Success

It is a pleasure to send you this catalog called GARDEN SUCCESS, and I hope you will like it. I will again offer you the highest quality Hardy Northern Grown stock at the lowest possible price. We have had an ideal growing season, and have over 2,000,000 plants to offer you. The South Michigan Nursery, I believe, will have a larger stock of the New Wayzata everbearing strawberry to offer this year, than any other one nursery in the country. We always have been headquarters for the famous Mastodon everbearing strawberry, and originator of the Alfred Blackberry.

Your order, large or small, will be appreciated. Most nurseries will not accept an order for less than one dollar. I will take your order from 10c up, and it will get just as much attention as one for \$10.00. Your order will receive my personal attention, and you will get a square deal, or I want to know about it. Your order will be acknowledged promptly by first-class mail, in the form of a duplicate copy.

Our terms are cash with order. Later in the season, if you are in a hurry, you may phone or wire your order and it will be shipped the same day C.O.D. Phone New Buffalo 27-F2. Western Union and Postal Telegraph service are both available.

If you have the money on hand when this catalog arrives, you can save some money by ordering at once. I am offering you 20% discount for all orders received in January, 15% for all orders received in February, and 10% discount up to June 1st. Don't overlook the nice premiums I am offering for \$5.00, \$10.00, \$25.00 and \$50.00 orders. This stock will be of the highest grade—not a lot of junk we want to get rid of. I want to thank all my old customers and friends who have ordered before. And to you who have never ordered from the South Michigan Nursery, will say that I believe that it will pay you to direct a trial order this way this year. Remember, satisfaction guaranteed. All plants are twice State Inspected, and found to be healthy and true-to-name.

Our Guarantee

We guarantee every plant sold by us to be first class in every respect, free from any injurious diseases or insects, and true-to-name, and hold ourselves ready upon proper proof, to refund or replace any that prove otherwise. It is mutually agreed between ourselves and the customers that we shall not be liable for a greater sum than the amount paid us for the plants. Not responsible for crop damaged by weather, fire or floods. We reserve the right to return money in case of shortage.

We are located in the **Great Fruit Belt** in Berrien County, Michigan, 1 1/2 miles from Lake Michigan, and 3 miles from the Indiana state line. M.C.R.R. and P.M.R.R. service.

REFERENCES

Citizens Bank, Michigan City, Ind., American Railway Express Agent, Postmaster, or Dunn & Bradstreet.

REMITTANCE

Our terms are cash with order. Or we will book early orders, if one-third of amount is sent with orders, and balance payable April 1st, or before plants are shipped. Remit by Draft, Post Office Money Orders, Express Money Order, Registered Letter, or your personal check. Stamps may be sent for small orders. **For the very best service, send money orders.**

HOW TO ORDER

Use the order sheet or ordinary paper. Write plainly the amount of each variety wanted, name of each variety and price. (**Write name and address plainly**).

(If possible, all members of the same family should order under one name.)

**LARGE
WELL SHAPED
BERRIES
VERY FIRM**

**SMALL HULL
DISEASE FREE
HARDY**

**3 FULL CROPS IN
18 MONTHS**

**DROUGHT
RESISTING**

A few years ago, before automobiles were **all good**, I often said I wished I could have a car with all the good points of all the makes in one car—then I would have a real automobile. WAYZATA is like that REAL automobile. It has all the good features of all strawberry varieties. First of all, it is the sweetest of all Strawberries. It is red clear to the heart, never ripens with a green tip. One of the most noticeable features of Wayzata is its very small hull, and this makes it easy to prepare for table use. The berry is well-shaped, firm, and ships well.

Wayzata challenges the world in size and productiveness. Will bear three crops in eighteen months. The plants will start to bear fruit in 60 to 90 days after setting. Wayzata adapts itself to the widest range of soils of any variety. It does excellently in a heavy clay soil, has given fine results in muck bottom lands, and, of course, never fails on sandy and sandy loam soils. Will even give satisfactory results in the lightest of yellow sand, with a little fertilizer added to the soil before setting. It is hardy and tough. Has stood 40 degrees below zero without injury. It seems that diseases and insects just do not like the Wayzata plants. Their dark green, leather-like leaves are very rarely attacked by any of the common strawberry diseases or enemies.

In drought-resisting, Wayzata does as well as Senator Dunlap. Wayzata makes very few runner plants, but makes stools of suckers that will also bear fruit. It is too busy making fruit buds and new stools. I have counted over 20 fruit stems on a single plant, and still more were coming out. The plant will be just loaded with ripe berries, green berries, blossoms and buds. This is continuous from July to winter. The very reason that Wayzata plants are listed higher than other varieties of Strawberries is that even with our scientific method of growing Wayzata **for plants only**, we have difficulty growing enough plants to supply the demand.

Stromer Offers Something New in Strawberry Plants

Notice the picture of the two strawberry plants. This is something new. This year we are listing Wayzata Strawberry clumps. The smaller plant to the left is a one-year-old runner plant, and the large one is a Wayzata clump. This clump is over ten times as large as the one-year-old plant. In April, 1936, this plant was only as large as the one-year plant; in six months it grew to the size that it is. The rule between them is an 18-inch rule, and this will give you some idea as to the size. This clump plant could be divided into 6 or 8 plants, and every one of them would do just as well as the one-year-old plant at the left, but by carefully planting this clump in your garden just as it is, by the middle of the summer you could have a single Wayzata plant as large as a bushel basket, and loaded with great quantities of rich red berries.

Twenty-five clumps should furnish enough berries for an average family. This very clump plant, before it was dug up to make this photograph, was fourteen inches in diameter. These Wayzata plants were grown on rich, new ground—note the particle of rotted wood fibers still attached to the roots. These CLUMP plants are mother plants that failed to send out runner plants and instead sent out stool plants all around the mother plant. These clump plants will give marvelous results with ordinary good care when set in your garden. They are much easier to start than the runner plants, because you have more to start with. They should be planted like you would a tree. The roots are long and plenty of them. Spread the roots out all over the shallow hole. DO NOT SET TOO DEEP and tramp the soil firmly around the plant. Keep all the buds and blossoms off the plants for the first five or six weeks. This will give the plants a good start, and then let them blossom all they want. You will have berries within three weeks after they start to bloom.

We have only a limited amount of these clump plants this year to offer, so get your order in early and be sure to be in on this new way of growing more Strawberries from a single plant. Our price is reasonable on these clumps when you consider that you get several plants in one when you get Wayzata clumps. DO NOT SET CLUMPS ANY DEEPER THAN EVEN WITH THE CROWN. It is always better to set any Strawberry plant too shallow than too deep. If set too deep the crown will rot out, and, of course, the plant will not do anything. The South Michigan Nursery is the originator of the WAYZATA CLUMPS.

Fitting the Soil for Strawberries

Soil for setting fruit plants should be plowed deeply and harrowed until it is loose and level. We like fall plowing as it allows the soil to settle and vegetable matter to decay. Spring plowing is all right, but fall plowing is better where possible. Begin plowing as late in the fall as possible before the ground freezes. This late plowing is beneficial because the soil lays loose and open, frost acts upon it more readily, and leaves it in condition to absorb more moisture in the spring to furnish a supply during the summer. The frost can then kill a great many insects that live over winter in the soil—white grubs in sod land, for example. As early in the spring as the soil will work up mellow, the land should be thoroughly harrowed, followed immediately with a heavy roller or plank drag. The soil should be firm for planting—this preserves moisture. You can mark out your ground with the same kind of marker used for other rowed crops. One marking three or four rows at once is a time saver.

WHEN TO PLANT. The earlier in the spring the better—as soon as you can prepare the land, so the spring rains will give your plants a good start. Plants should be shipped and set before they start to grow much, while the plant still has all its vitality. It is to your interest to set your plants as early as possible.

Many prefer to set plants in the fall, and to accommodate them we make some shipments after October 1st to 10th. Plants are fully rooted then and will become well established before cold weather, going through the winter in good shape.

CARE OF PLANTS WHEN RECEIVED. If the ground is not ready when the plants reach you, an easy way to keep their full vigor for planting is as follows: Carefully separate the varieties—take each variety, a bunch at a time, cut the strings, and spread the plants in a thin row along one side of a shallow furrow. Then cover roots only. They will keep in good condition for 8 to 10 days. When transplanting to the field be careful not to mix the varieties.

Strawberries

PLANTING DISTANCE. For commercial planting, plant rows 3 ft. 8 in. apart, the same as for corn—and putting the plants 14 to 18 inches apart in the row, about 8,000 plants per acre. By training plants to a matted row, you get a good picking width.

In the home fruit garden the rows may be set only three feet or even as close as 2 feet with plants spaced about the same as above.

SETTING PLANTS. Make holes with a spade by putting in ground six to eight inches, and pull toward you; then take out. If ground is in good condition and soil is damp, this should leave a "V" shaped opening. Hold plants in this hole with hand and close hole with one foot, pressing firmly (with feet) on both sides of plant. If one is setting plants alone a row of holes may be made, then take plants and set that row. If two are working together one can make holes and the other set the plants. Great care should be taken to set the plants at the right depth. Plants should set the same depth as they were before being dug, with the crown of plant even with surface of ground. This is important, as the plants set too deep will be washed over with mud and those set too shallow will dry out.

Dip roots in water just before setting if ground or plants are dry. Garden plants may be trained to the hill system with plants set about 12 inches apart in the row. All runners are cut off so that the original plant forms the entire hill. This system will produce fewer berries of larger size.

CULTIVATION AND CARE DURING FIRST SEASON. Cultivation should be continuous throughout the growing season and early fall, keeping the soil finely broken up to prevent loss of moisture, and at the same time bring it up to the surface within reach of the plant roots. As plants grow, give shallow cultivation so as not to disturb root growth.

BLAKEMORE (Early)

The United States Department of Agriculture Recommends It.

This wonderful new creation called the BLAKEMORE (U.S.D.A. No. 659), was originated from a cross of the Missionary and the Premier in the year 1923 by the United States Department of Agriculture. The berries are much firmer than the Premier, Missionary or the Klondike. The BLAKEMORE are slightly blunted conic with broad shoulders and slim neck. The shape of the Blakemore might vary some in different localities. Easy picking and hulling qualities. The berries are a beautiful bright glossy red color, with tough skin, firm flesh, with wonderful mild flavor. Plants make runners freely, and you are sure of getting a good fruiting row. They should be set about 24 inches apart. If set closer than that they will get too thick. It has been tried out and found to be one week earlier than Premier. It is a wonderful market berry. Why wouldn't it be? Think of it—one week earlier than Premier.

Stromer's

PREMIER

**THE MOST
POPULAR
BERRY
Ever
INTRODUCED**

If you plant STROMER'S PREMIER you will get the first berries on the market. They will be bearing heavily before other varieties begin. Your biggest picking will be when berries are in good demand and are bringing top prices.

Premier will grow anywhere. The plants are sturdy and long rooted, a good drought-resister. The berries are very large, and hold their size to the last picking. The flavor cannot be beaten.

In Premier we offer you the greatest early Strawberry of all time. However, the early ripening of this variety is only one of its many good features. It is immensely productive, and unlike other early ripening Strawberries, the fruit produced by Premier is of the very finest quality, color, texture and flavor; and last but not least, every berry is large in size and uniform in shape. For every purpose that a Strawberry is wanted, Premier is supreme—eating, canning, preserving, distant and local market—no other variety can give you any more pleasure, satisfaction or profit. Premier succeeds everywhere and never fails to give a big crop of the very finest berries. The foliage is tough and healthy and grows tall and rank, covering the blossoms and berries, and protecting them from frost and scalding sun.

SENATOR DUNLAP

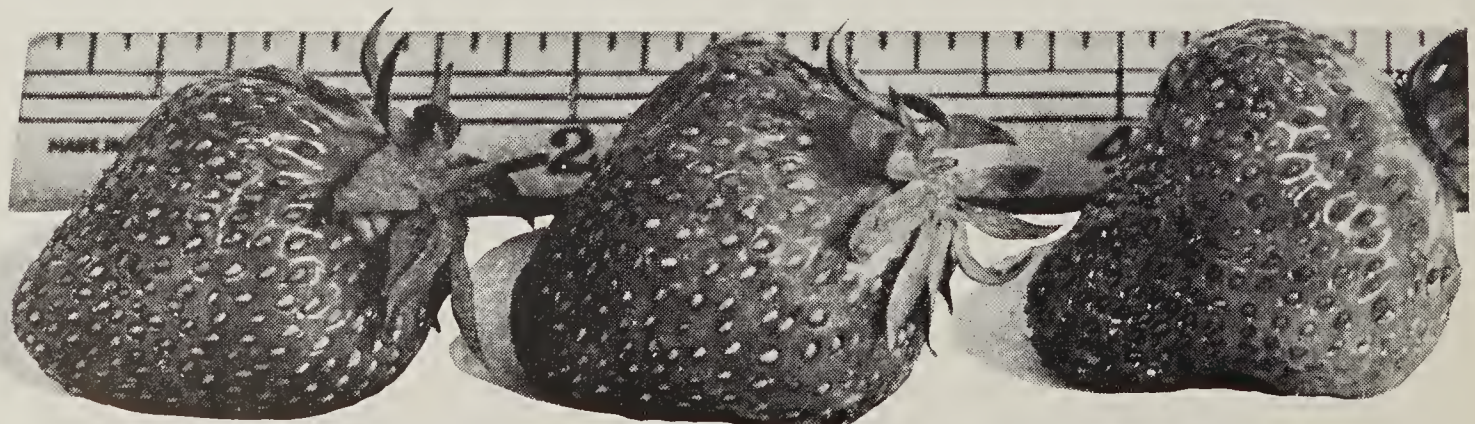

(MID-SEASON)

SENATOR DUNLAP IS AN OLD STANDARD VARIETY. It has made more crates and more dollars for berry growers than any other one variety. Requires very little attention. It's the toughest variety known. Plants are healthy, fast growers, and make plants freely. Should be set 24 inches by 36 inches apart in rows. Berries very dark red. Wonderful canning berry; great for preserves. Senator Dunlap is sometimes sold under the name of Dr. Burrill. We can see no difference between these two varieties, except the cost of the plants.

Blakemore. Notice how the hull stands away from the berry.

FAIRFAX

The Quality Berry

It is considered by most everyone who has tasted them to be by far a better flavored berry than Premier, and other good flavored berries. FAIRFAX, like DORSETT, was introduced by the United States Department of Agriculture, and is supposed to be a cross between the Premier and the Royal Sovereign. The foliage, like that of Dorsett, is of a very good quality. Good foliage means a good fruiting berry.

Fairfax is also a very productive berry, having produced at the rate of 5120 quarts per acre. The size of the berries averages large. They will average with the Chesapeake, and that is going some. Fairfax is a little more firm than Dorsett, and is fully as firm as Blakemore. This makes it a wonderful shipping berry. The color of the Fairfax is light red, with yellow seeds, and a nice green hull, making a beautiful combination. You should by all means try some Fairfax this spring.

GRAND CHAMPION

(ALL SEASONS)

Greatest money-making Strawberry ever introduced, no crop failure on account of frosts. Has produced over 5000 quarts on one-half acre in spite of heavy spring freezes.

Grand Champion

ALL SEASON BEARER. Commences to ripen with the Premier, the earliest berry, and produces fancy berries with the Aroma, which is a late berry. Plants are large, extra heavy, healthy foliage; berries are bright red, very large in size, and have a fancy appearance. By all means try a few in your locality. Supply is very limited. Order early to avoid disappointment.

Surplus Everbearing \$6.50 per 1000 Strawberry Plants

During our digging season, often there are a few plants left over after each day's packing, and rather than hold these, will offer them to you for \$6.50 per 1000. These will be No. 1 in every way, but will not be labeled. They will be either **Woyzato**, **Mastodon**, or **Gem**, as they are the only everbearing varieties that we have. On page 9 we offer non-everbearing varieties in a surplus at \$4.00 per 1000. The supply of both will be limited, so order them early.

A BARREL OF STRAWBERRIES and a Barrel of Fun

Grow any everbearing strawberry in a barrel. 50 plants can be planted in a camman sugar barrel, or even an old patata barrel. Bore 2-inch holes in the side of the barrel, and fill barrel with same good soil. Then set the plants in these holes, and 10 plants can be set on top. Keep well watered. Be sure to bore a few small holes in the battam for droinage. Borrel can be kept in the back yard, or even on the back porch. This saves space, and you can have berries for breakfast twice a week. Na weeds, no cultivation necessary. Keep runners pinched off. Wayzata would be the ideol variety to grow by this method. They make very few runners, but great quantities of berries. Be the first on in your neighborhood to try this stunt.

SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

Displays Large Berries

A quart of huge Dorsett Strawberries grown by Harry Wakeman of Bangor are exhibited by Sid Smith of Breedsville, State Fruit Inspector, on the Twin City market.

The berries average between $1\frac{1}{2}$ and $1\frac{7}{8}$ inches in diameter and are a solid red fruit said to have as rich qualities as the Dunlap. A truckload of the berries shipped from Anna, Ill., to Duluth, Minn., a distance of over 800 miles, held their color, shape and taste exceptionally well, according to Mr. Smith.

Famous DORSETT

6640 Quarts to the Acre

This new variety was originated by the United States Department of Agriculture. It is a cross between the PREMIER and the Royal Sovereign, an English variety.

Dorsett is one of the finest berries known, and one of the heaviest producers, having produced at the rate of 6640 quarts per acre in the East. The foliage is a very dark green and holds this fine color way through the fruiting season. Dorsett berries average very large in size, even a little larger than Premier. Color is of light red, and will hold this light red color long after picking. This probably will be a big factor when you market them on the wholesale markets, as that is what the wholesale fruit buyers are looking for in the past few years. Light red berries always appear to be in better shape than do dark red ones. Be sure to try a few of the plants this year. Dorsett is now the leading berry for all purposes.

New! Catskill

Has Been Known to Outyield Even Dorsett and Fairfax

Berries average about as large as Fairfax. Will hold their size well to the end of the picking season. Makes a fine, vigorous plant growth. Leaves are the largest we have ever seen on any Strawberry plant. Fruit stems are thick and grow upright. Berries ripen mid-season, and quality compares with Aroma and Blakemore. It was introduced by the New York Experiment Station several years ago, and we have great hopes for it. Plants are still quite scarce and our supply is limited. State certified plants of this variety are priced as follows:

GEM Everbearer

BEARS 60 DAYS AFTER PLANTING

Gem—o direct offspring of the old Progressive Everbearing Strawberry.

Gem was discovered four years ago by Frank Keplinger of Central Michigan. Mr. Keplinger found a single plant growing in his Progressive field. This plant was so much better that it was guarded, and planted by itself. The Gem berries are above the average in size.

Gem has a flavor like the Progressive or Champion. Not much sugar needed when you eat **Gem**.

Firmness—Firmness is what is needed in Strawberries if they are to stand shipping. Gem has this firmness. Next to Wayzoto they are the most firm Strawberry we have ever grown.

Disease Resistant—We fail to find any disease on **Gem**.

Productive—We find them to be as productive as the Progressive or Champion. They are, however, much larger in size.

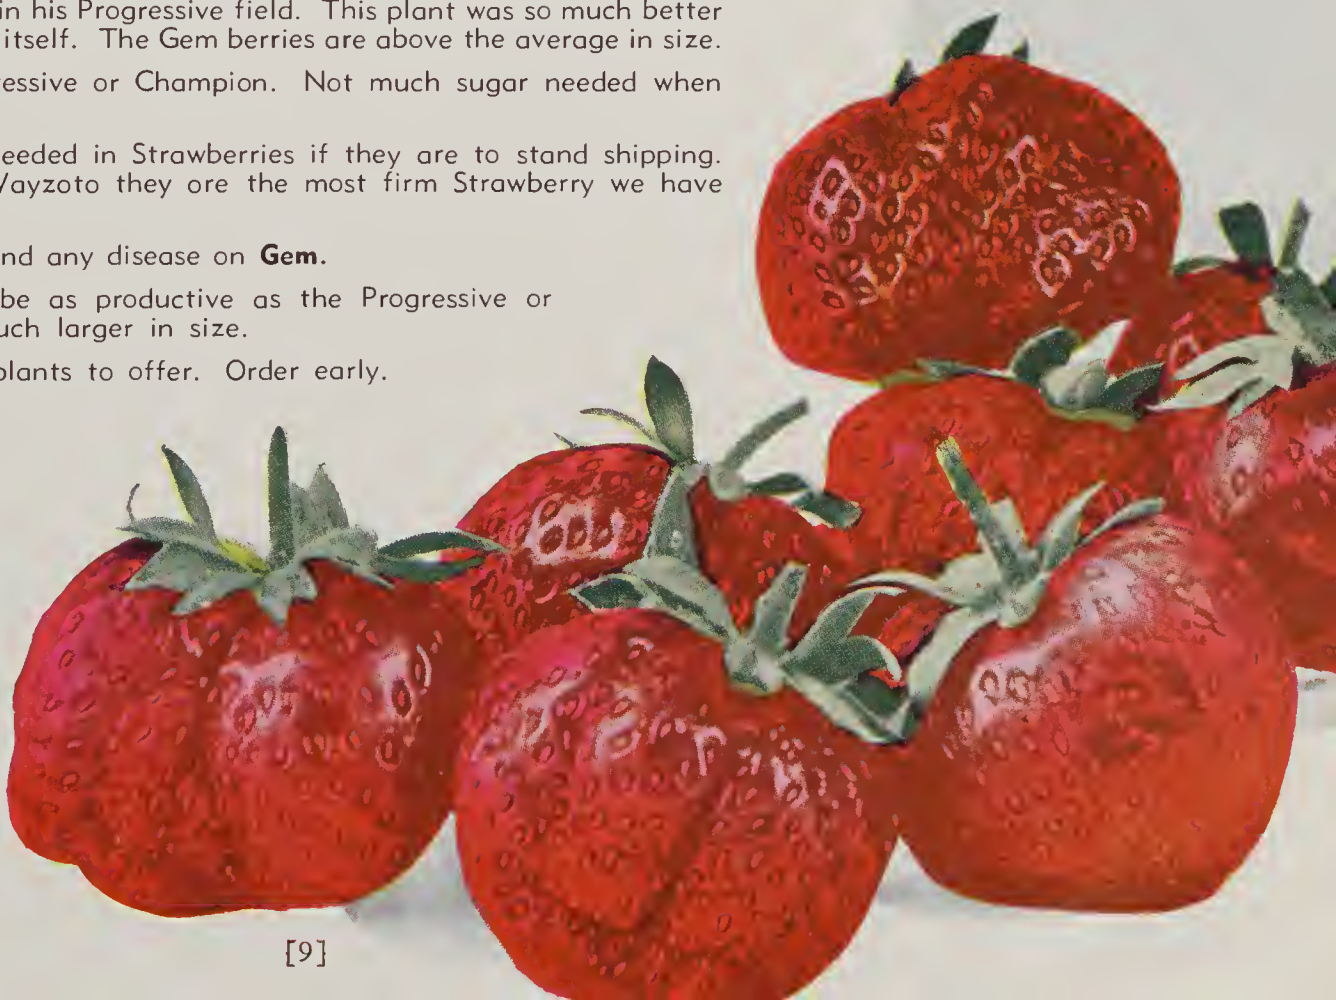

Have only a limited supply of plants to offer. Order early.

Claremont

Claremont is a seedling from a cross of the Premier and the old Marshall. It was introduced by the New York Experiment Station a few years ago. It now has been out and tried in a wide area, and has proven to be a real wonder. This year especially, being very dry during the picking season, the Claremont outbore all other varieties, even the Dorsett and Premier. One feature that was noticed is that the last berries were nearly as large as the first ones. Berries are smooth, bright glossy red (appear to be varnished), have an attractive calyx. The plant makes a fine fruiting row, and therefore is one of the best money-makers we are offering. Plant Claremont and be convinced.

Claremont

Ambrosia Late

The Ambrosia Late is absolutely the very best late Strawberry that we have today. It is also the very largest Strawberry that we have ever grown. Thirty berries are known to fill a quart box. Plants grow tall and vigorous. Have seen them growing on good land, where the leaves and fruit stems would

be 14 inches tall. As the berries ripen and get heavy, the fruit stems will turn down, and what a sight to look at, when you brush the leaves to one side. At last we have found a real good late Strawberry to lengthen the Strawberry bearing season.

Washington Asparagus

There is no variety of Asparagus as good as Washington, and whether for home use only or for market, you cannot afford to grow any other. This wonderful new Asparagus was developed and introduced by the U. S. Dept. of Agriculture, and although a recent introduction, it has become famous the country over.

Growers everywhere are discarding all other varieties in favor of Washington, because it is earlier, the stalks are larger, more tender, more productive than any other variety, and last but not least, WASHINGTON IS IMMUNE FROM RUST.

1-year, No. 1 roots: 12 for 30c; 25 for 50c; 50 for 85c; 75 for \$1.10; 100 for \$1.65; 200 for \$2.35; 300 for \$2.80; 500 for \$3.50; 1000 for \$6.50.

LESS DISCOUNTS

Washington Asparagus

ASPARAGUS CULTURE. To make an asparagus bed, prepare a place of fine loamy soil, to which has been added a liberal dressing of rich manure. For a garden, set in rows eighteen to twenty inches apart, with plants 12 inches apart in the rows. Make a small mound of the soil, over which the roots should be spread, then cover plants with about three inches of soil.

Stromer's Giant Cherry Rhubarb

Before, Rhubarb was just Rhubarb, but now it is different. Stromer's Cherry Rhubarb is the one best Rhubarb of them all. This is a long-season Rhubarb. It will start to grow very early in the spring, and you can still be pulling it in late September. The color of the stems is a brilliant red, often three feet tall, depending on the soil. Twelve to fifteen of these long bright red stems on a plant to a time. Older plants have been known to bear fifteen pounds to a picking. It is less acid, and a much better flavor than the ordinary kinds. The stems are large and require less cooking without peeling them, and much less sugar. Commercial growers are making real money with this variety, and home gardens will find it the best to grow hereafter. Four plants will be plenty for a family of five. Set as early in the spring as possible on good rich soil. Cherry Rhubarb cannot be grown from seed. We offer nice nursery-grown roots at the following prices. Each, 35c; 4 for \$1.00; 12 for \$2.50, LESS DISCOUNTS. If interested in larger lots, please write for prices.

Cherry Rhubarb

Myatt's Linnaeus Rhubarb

Myatt's Linnaeus Rhubarb is an early, tender, fast growing kind, with a mild sub-acid flavor, and is not tough and stringy like most sorts. Plant some of this Rhubarb this spring, and make some early money. We are offering select No. 1 roots at a very low price.

1-year, No. 1 roots: 10c each; 40c for 6; 65c for 12; \$1.20 for 25; \$2.25 for 50; \$4.00 for 100; \$7.50 for 200; \$10.50 for 300; \$15.00 for 500; \$30.00 for 1000.

Extra heavy, 2-year clump roots: 25c each; 70c for 6; 95c for 12; \$2.00 for 25.

Horseradish

Horseradish will grow any place. Likes a wet soil of heavy nature best. Valuable for relishes and appetizers. Grate roots early in the spring. We offer roots at very low prices. Set the roots straight up and down, and leave the top of the root about one inch below the surface.

Prices: 6 for 35c; 12 for 60c; 25 for 85c; 100 for \$2.95. All No. 1 roots.

Giant-Improved Strain MASTODON

**3 FULL CROPS
IN 18 MONTHS
3 BIG PROFITS**

Everbearing

When we tell you that Mastodon does produce three full crops in 18 months it is the largest berry grown; bears in 90 days after planting; is an excellent shipper; brings more per quart; and is a delicious home use berry—you probably won't believe it unless you have grown them yourself—and we don't blame you, but read what other folks have to say.

Mastodon does not require special soil, care or petting. Sell for 30c to 50c per quart. Mastodon sells like "hot cakes" on roadside stands. Commences to bear in 90 days after you set them. We picked 181 quarts of berries from 1 1/2 acres on November 1st, and on November 2nd the ground was frozen solid. This frost is what stopped the Mastodon. Light frost will not injure them at all.

We often have folks ask us "How many quarts will 100 Mastodon give us a week?" We have watched our Mastodon fields this summer, and find that they will bear 3 quarts 2 times a week. If it is cool, they will not do quite so well. It takes about 8000 plants to set an acre, so that makes 480 quarts per week per acre, and sell for 25c per quart, making \$120.00 per acre per week.

A REAL WONDER

It is the largest everbearing berry grown. Mastodon is the most prolific, the finest, the most beautiful berry with the real Strawberry flavor. It is a berry that bears early and late; one that can be picked all spring and summer. Many of the berries grow as large as a silver dollar, and are just as perfect. Mastodon is the real marvel in Strawberries; nothing like it has ever been known. Plants that were set in May this year have produced as high as 3 quarts per plant. A field of this Mastodon in bearing is a sight never to be forgotten.

Here's How Mastodon Does it

- 1 Plant this spring—1938.
- 2 Pick first crop—July to winter—1938.
- 3 Pick second crop—June—1939.
- 4 Pick third crop—August to winter—1939.

**3 BIG CROPS
3 BIG PROFITS**

4 acres of Mastodon being picked in late fall

DEAR SIRs:

South Solon, O., July 9, 1937

I want to report to you the success I have had with the Everbearing Strawberries I purchased of you last April. First, the entire shipment came through in excellent shape—Order No. 9493.

Almost 60 days to the day, from the time we set them out, we had our first shortcake—that was the 10th of June. Now they are blooming again. I picked a small handful of the first ripe berries of the second crop, yesterday, July 18th.

The first crop yielded approximately 2 1/2 gal. from the 200 plants set out, and we lost four plants out of that number from injury and accidents after setting.

They have grown profusely, borne well, and yet have put out more than 1000 runner plants. However, it has been an excellent growing season.

We are more than pleased with plants and service.

Sincerely,

REV. CAREY CHRISTY

Caco

Caco

CACO

New Red Grape

This is the new, quick growing, young bearing, early ripening, deliciously sweet, big red Grape that has created sensations in nearly all of the large Grape growing centers of the country.

As a variety for home use, leading horticulturists and experiment stations claim it has no equal, and we will vouch for this statement.

Caco has a peculiar characteristic not found in any other variety, in that it is so rich, melting, sugary and excellent in flavor that it can be eaten with rare enjoyment fully two weeks in advance of being fully ripe.

In appearance it is the most beautiful of all hardy Grapes, possessing a rich wine-red and amber coloring. The berries are usually large; bunch large and compact.

The vines are very strong, perfectly hardy, vigorous growers, healthy and prolific; ripening as it does early in September, the big crop is fully matured before danger of frost.

Always in demand on all markets at extra fancy prices. If you have a roadside stand, you will make money with Caco. They will be back for more.

PORTLAND

A new white grape developed in Fredonia, N. Y. Ripens earlier than any other known grape, which permits its being planted over a wide range of territory. Berries large, and have that beautiful yellowish color. Quality excellent, equal to the Niagara and other later Grapes. It contains much sugar and can be eaten before it is fully ripe. Vine hardy and productive. You will be pleased with this new Grape. Makes a beautiful showing with Fredonia.

Grape Cultural Directions

Locate your vineyard on a hillside if possible, to avoid frosts. A north exposure is preferable because it delays growth in the spring, avoiding injury to crop by late frosts.

PLANTING. Plant 10x10 ft.; 8x12 ft.; or 8x10 ft.; according to soil. Heavy soils produce large vines which should be farther apart in the rows so that after pruning there will be no overlapping on trellis by canes of the adjacent vines.

Trim off broken or long straggling roots. Make holes large enough so most of roots may be retained without tangling.

PRUNING—First Season. Prune roots to 8 to 10 inches and cut tips to 2 or 3 good buds when set. Let new shoots grow. Put in posts and wire ready for next season.

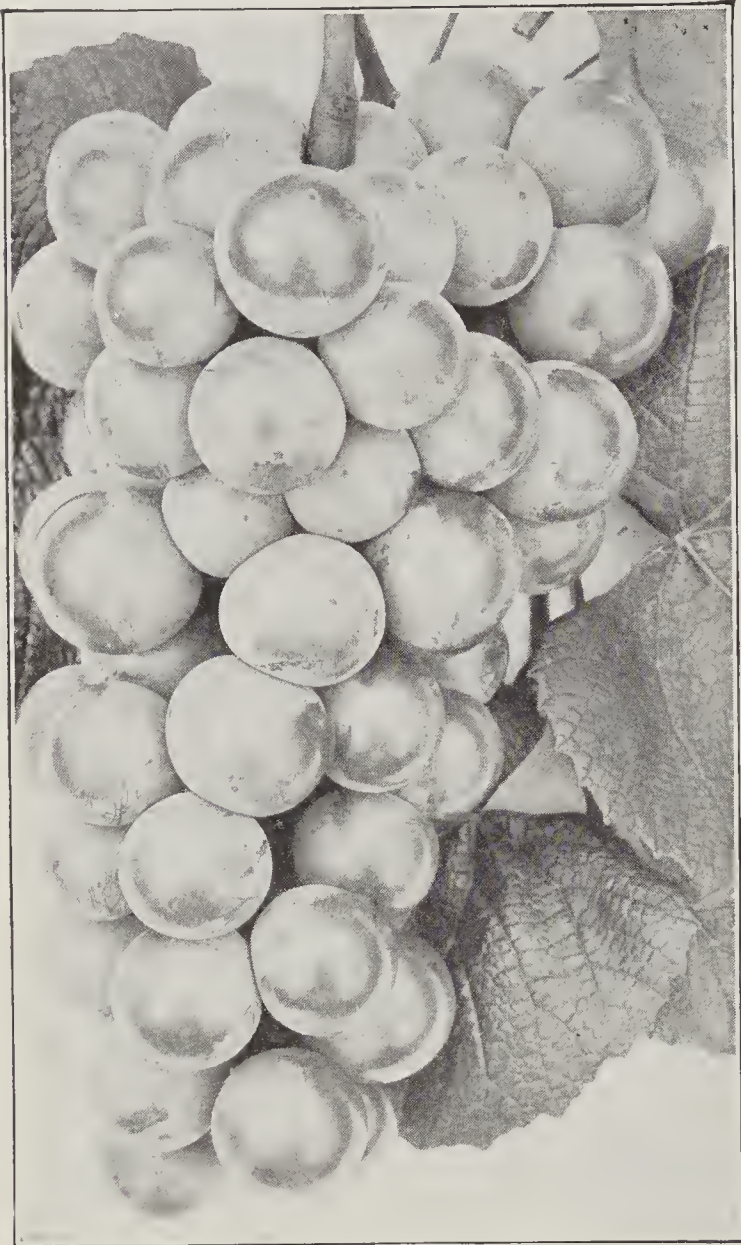

Second Season—In early spring select best shoot, tie to lower trellis wire, and cut the rest away. Let new shoots grow.

Third Season—In early spring select four best side canes from main trunk already staked, and tie to wires. (One each way from trunk on each wire).

Following Seasons—In early spring cut off all side canes that have fruited, nearly back to main trunk, leaving a short spur on which are one or two buds to produce the canes for next year. Select four canes that have not fruited and tie to wires.

CULTIVATION. Except for pruning back and giving the vines proper support on trellis or stretched wire, grape vines require but little cultivation during the first growing season. The ground around the roots, however, should frequently be loosened up. After coming into bearing, begin shallow plowing early in May, furrowing away from vines. After plowing, level cultivation should be done with either a spike or disc harrow.

For home garden cultivation the above directions may be carried out with spade, rake and hoe or garden cultivator.

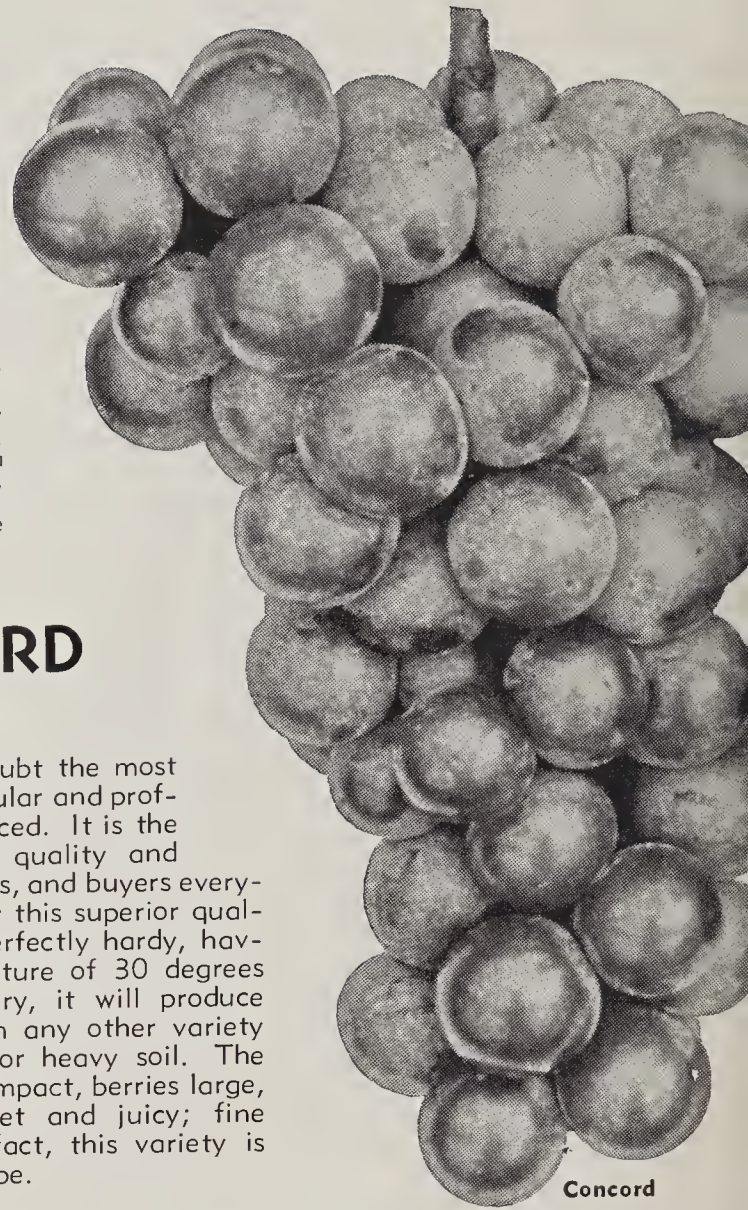

Niagara

NIAGARA (White)

This is the Great White Grape that succeeds everywhere and under all conditions. In fact, it is really the White Concord, as it seems to have all the good characteristics of that great variety, being equally as vigorous, hardy, and productive. Due to the tough, leathery foliage, Niagara is practically immune to fungous diseases. It is one of the most delicious and beautiful of hardy Grapes and sells at fancy prices. Berries are large; bunches large and compact; color greenish yellow when fully ripe; juicy, sweet and delicious. Whether planting for home use or market, include Niagara in your order. **Prices above.**

CONCORD (Blue)

Concord is without doubt the most productive, the most popular and profitable variety yet introduced. It is the standard of excellence, quality and comparison on all markets, and buyers everywhere pay a premium for this superior quality Grape. Concord is perfectly hardy, having withstood a temperature of 30 degrees below zero without injury, it will produce more fruit per acre than any other variety and does well on light or heavy soil. The bunches are large and compact, berries large, bluish black color; sweet and juicy; fine quality and flavor. In fact, this variety is the one all-purpose Grape.

DELAWARE RED GRAPE

A rich and delicately flavored little red Grape that is generally recognized as the standard of quality to judge other Grapes by. An exceptionally desirable variety for home gardens on account of its compact habit of growth. Commands a premium in all the markets, often selling for twice the price of Concord. Very hardy. Ripens here about the middle of September.

MOORE'S EARLY (Black)

Ripens about two weeks earlier than the Concord; large berries and bunches. Excellent for home use and market, and does not winter-kill.

Lost Labels

Like with raspberries, each year we have a certain amount of Grape plants, where the labels become lost, and we do not know the variety, so we will offer them to you at the prices below. Varieties or sizes will not be guaranteed, but they will be perfect, and every one will grow.

The New **YOUNGBERRY**

This new berry is so much different from any berry that is grown in most parts of the country. It is a cross between the Loganberry and Dewberry. Color of fruit is a rich wine color. Size 1 to 1 1/2 inches. Flavor is pleasant, sweet, with the tartness of the blackberry. Excellent for table use, canning, jellies, pies, and for wine. The plant is a rank grower. Withstands cold and heat, adapted to a wide range of soils, a great producer. Try them in your locality. They will be the talk of your neighborhood. Plants are still scarce, and a little high in price. **Prices same as Lucretia.**

LUCRETIA The Big Hardy **DEWBERRY**

The only real good Dewberry on the market which is good for all purposes, being very productive, of extra large size earlier than any of the rest, will grow and thrive on very light soil and live for many years. If you live in a locality where your thermometer registers seven degrees below zero, you can easily prevent the vines from winter-killing by laying down on the ground and covering them with straw, which can be held in place by just a few shovelfuls of earth. Then in the spring they can be taken up and tied to wires which are fastened just like a grape trellis, but not as high, something like three feet high is about right. Dewberries make a good addition to your blackberry list, you will like them as well or better for all uses than the common run of blackberries, and ripening early, you get the advantage of higher prices; as the berry is much larger, you can pick a crate quicker. They grow practically free from all diseases.

BERRY CULTURE

PLANTING. Black Raspberries and Purple Raspberries (which are hybrids of the black and red varieties and in habit of growth, propagation and culture are very similar to the Black Raspberry), should be planted 3 1/2 feet apart in row, with rows 7 feet apart, requiring about 1,725 plants per acre. We recommend setting Black Raspberries the same as Strawberries, by making holes with a spade and following same method described for Strawberries. Many, however, prefer to plow a straight furrow and set the plants against the land side, pulling dirt around the plant with a hoe or hook, and pressing earth firmly (with feet).

CULTIVATION. Shallow, regular use of cultivator during the remainder of the growing season holds moisture, and keeps down weeds. The second year plow away from rows before growth starts in the spring and clean cut the rows with a hoe. Cultivate thoroughly during growing season to keep up the moisture and insure a good crop. In the fall plow toward the row.

BLACKBERRIES

PLANTING. Set 3 1/2 feet apart in row, with rows 7 feet apart, about 1,725 plants to the acre. Cultivate same as Black Raspberries.

PRUNING. Same as Red Raspberries, but tips of canes may be cut off when about 30 inches high to make a stockier bush. Good yields for 5 to 6 seasons.

YOUNGBERRY AND DEWBERRIES

DEWBERRY CULTURE. Sandy soil is best for Dewberries. Plant in rows 6 feet apart with plants 3 feet apart in the row. 2400 plants per acre. In the North, train fruiting wood on stakes and wire each spring, trimming out and thinning the superfluous wood which is to produce fruit the coming season. Mulch in late fall or winter. In the South it is not necessary to train on wire but thin out fruiting wood each spring and prune out all new growth once a month until after blooming time. Then have only sufficient new growth for next year's crop.

RED RASPBERRIES

PLANTING. Plants should be set about 3 feet apart in the row, with rows 6 feet apart, requiring 2,425 plants per acre. (Method suggested for setting Black Raspberries is all right for Red Raspberries). Plants yield good crops for four or five seasons.

CULTIVATION. Same as for Black Raspberries. Thorough cultivation is necessary for keeping up moisture to insure good crops.

PRUNING. Remove all old canes at close of picking season and thin out the new growth. The new canes are not tipped back, but allowed to grow as they will. Proper thinning and spacing of new canes is important. Most varieties produce suckers freely from underground stems and if all are allowed to grow, the plants become crowded and the ground soon becomes covered with sucker plants. All suckers and weak canes should be cut out and if they are kept in hills not more than 5 to 7 of the best canes should be left in each hill to produce next season's crop. They are most commonly allowed to fill in the spaces between the original plants, forming a solid row or hedge. Hedge-rows should not be allowed to become more than 10 to 12 inches wide. All suckers which appear outside the limits of the row or hill should be destroyed by cultivation, or if necessary, chopped off with the hoe. No pruning back is necessary in the spring unless parts of the cane have been damaged by winter.

CHIEF Earliest **RED RASPBERRY**

Chief is an offspring of Latham, originated in Northern Minnesota where the temperature goes to 45 degrees below zero. In productivity it compares favorably with the heavy bearing Latham.

The bushes are strong and sturdy, the foliage is healthy, dark green. The berries are large, extra firm, do not crumble, are a beautiful bright red, and of the finest eating and canning qualities.

Chief ripens ahead of other Raspberries, when the demand is at its best and top prices are assured.

Latham

LATHAM
Big Red Raspberry
2000 LATHAM
1-yr. medium only
\$17.00

Although this is a comparatively new variety, it is entirely past the experimental stage, and we unhesitatingly recommend Latham as one of the best Red Raspberries ever grown. This variety originated at the Minnesota State Fruit Breeding Farm and is being grown extensively in Minnesota, the Dakotas, and Canada, and has never been known to winter-kill even though exposed to 45 degrees below zero. Latham is a tall, vigorous grower, canes extra heavy,

foliage dark green, entirely free from disease. Ripens with Newburgh and is enormously productive. Berries much larger than any other Red Raspberry, many of them 1 inch in diameter. Color good, quality of the best, full Raspberry flavor. Excellent for shipping or home use.

CUMBERLAND
The Business Black Cap

This is without question one of the most profitable and popular Black Raspberries ever grown. It is the one safe and reliable commercial variety because you can depend on a big crop regularly. We call it the "Business Blackcap" because it succeeds on all soils and produces its big crop year after year.

We have never known Cumberland to fail, and the best proof that it is a profitable variety is the fact that the demand for plants is greater every year and more Cumberlands are planted than all other varieties combined.

Cumberland is perfectly hardy and tremendously productive. The berries are extra large, glossy black, and not equaled by any other variety in quality, flavor or appearance, except Logan. Whether wanted for market or home use, we can recommend Cumberland to our most exacting customers. Disease-free. Twice state inspected plants. Priced above.

Cumberland

ALFRED Blackberry
STANDS 35° BELOW ZERO

GEORGE STROMER—Originator

Year after year, with diligent care, I have propagated these plants to such an extent that the fruit is now being supplied to the local markets at a fancy price, and is always in good demand. Last year I measured a good many berries that were over one and one-half inches long, and three inches around. Nurserymen claim that the ALFRED is the largest berry they have ever seen. Buy from the originator and get GENUINE ALFRED.

Lock of space forbids describing in detail the many good points of this variety; however, I wish to call your attention to the outstanding reasons why the ALFRED is superior to all other varieties.

BEARS SECOND SEASON. ALFRED is such a healthy, vigorous grower that it produces a good crop of berries the year following planting. It is not unusual to pick 10 to 40 berries from the bush the same year planted.

IMMENSE SIZE. The berries are twice as large as ordinary Blackberries, many of them 1½ inches long, and the finest flavored of all Blackberries. It is an ideal table berry because it is practically CORE-LESS, sweet and delicious. It is very small seeded.

EXTREMELY HARDY. ALFRED can be grown anywhere without winter protection, having withstood 30 degrees below zero, and not a single tip of a branch injured, while other varieties were frozen to the ground.

EARLY SEASON. This is one big feature of this variety. It ripens a week to ten days earlier than Eldorado and in productiveness it is in a class by itself. We have seen them bear a second crop. We picked many cuses this year in September. As I watch the ALFRED year after year, I am more and more thoroughly convinced that the ALFRED BLACK-BERRY WILL HAVE A PROMINENT PLACE IN THE VALUABLE FRUIT HALLS OF FAME.

Alfred

ST. REGIS EVERBEARING RASPBERRY

One of the most valuable of all red everbearing Raspberries. The habit of growth is of a bushy nature; will produce berries the first year in the fall, and a full crop the following spring and again in the fall.

St. Regis resembles Chief; its fruit is similar to that variety in quality, flavor and appearance. In September, long after Raspberries are out of season, St. Regis will bear a full crop of fruit, which commonly sells for seven or eight dollars for a 24-pint crate. If you have a market at hand where you can dispose of the fruit, you will find St. Regis a very profitable investment when grown on a commercial scale. If you have not the time or the ground to grow St. Regis for market, be sure to plant at least a few bushes in the garden and keep your table supplied with all you can use.

NEWBURGH
The New Red Raspberry

NEWBURGH was introduced by the New York Experiment Station a year or so ago, and all indications are that NEWBURGH will become the leading commercial Red Raspberry.

BECAUSE:

1. It has so far proven immune to mosaic.
2. Fruit very large, firm and holds its size.
3. Very productive. Yield 30 per cent larger than Latham.
4. Ripening season a few days earlier than Latham.
5. Extremely hardy.

Priced above

Newburgh

POTOMAC *Purple Raspberry*

The brand new variety of Raspberry. Introduced by the U. S. Department of Agriculture. It is a cross between a black Raspberry and a red Raspberry, making it a purple Raspberry. Compared side by side with Cumberland, showed about twice as many berries on the Potomac as the Cumberland. Less berries were required to fill a quart of Potomac than a quart of Cumberland, so that will give you an idea as to the size of the berries. It is very free from diseases. Makes fine jellies and preserves. It is the very best of all the purple varieties. We still have a very limited supply of plants of this variety to offer.

TAYLOR *Raspberry*

The berries are very large, much larger than Latham, hold up well through a long season. It has a long conic shape and is of a bright red color with a complete lack of crumbling, which adds materially to the appearance and attractiveness. The firm, thick flesh and the very small cavity make it the ideal shipping berry. Flavor is sub-acid, of the highest quality, which is equal to Latham. Ripens the same season as Latham and bears an enormous crop. They do not cling too tightly to the bushes.

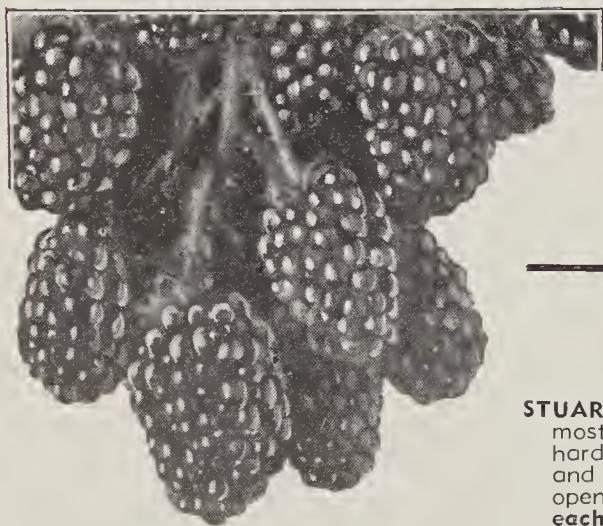

The Taylor fills a long-felt desire for a perfect Red Raspberry.

SODUS *Purple Raspberry*

The Sodus is the most promising early Purple Raspberry. The berries are very large and firm, with good quality, and do not crumble as Columbian do. Plants are very vigorous and bear an unusually large crop, much more so than one can imagine, and up to the present time we have noted no winter injury whatsoever. Unlike our older purple varieties of Raspberries, we find them practically 100% free from diseases, and where Purple Raspberries are grown for commercial or home use, this variety should replace the present varieties.

Early Harvest Blackberry

Stuart Pecan

Potomac

INDIAN SUMMER *Everbearing Raspberry*

The berries are large, somewhat conical and slightly irregular in shape. Of medium red in color and of high quality. Well suited for home gardeners and nearby markets. They are decidedly superior to any of the other fall-bearers or so-called Everbearing Red Raspberries, that have up to this time been offered to the trade. The plants are vigorous and above medium height and bear a heavy crop. We can also personally recommend this variety to be worthy of a trial as a high quality early spring berry.

EARLY HARVEST *Blackberry*

150 bushels of "Scarff's Fruiting Strain Early Harvest" from one acre sold as high as \$4.00 per crate. The earliest to ripen and the most productive of the early sorts. There are a number of different strains of Early Harvest Blackberries, all alike in appearance of wood and growth, but vastly different in productiveness. We noticed this peculiarity soon after its introduction, and have, by careful system of selection, selected a strain that is simply marvelous for great yields of luscious fruit. We have not only increased productiveness, but size as well, and now have an early variety that cannot be excelled, as it ripens so early that it always sells at enormous prices. Prices: 1-yr. No. 1, 25 for \$1.00; 50 for \$1.75; 100, \$3.00; 250, \$5.95.

NUT TREES

STUART PECAN. Probably the best known and most valuable of all the Pecans. Extremely hardy and a strong grower. Nuts are good size and well filled. Shells are very thin and can be opened easily. Prices: 2 to 4 ft. trees, \$1.35 each; 2 for \$2.50.

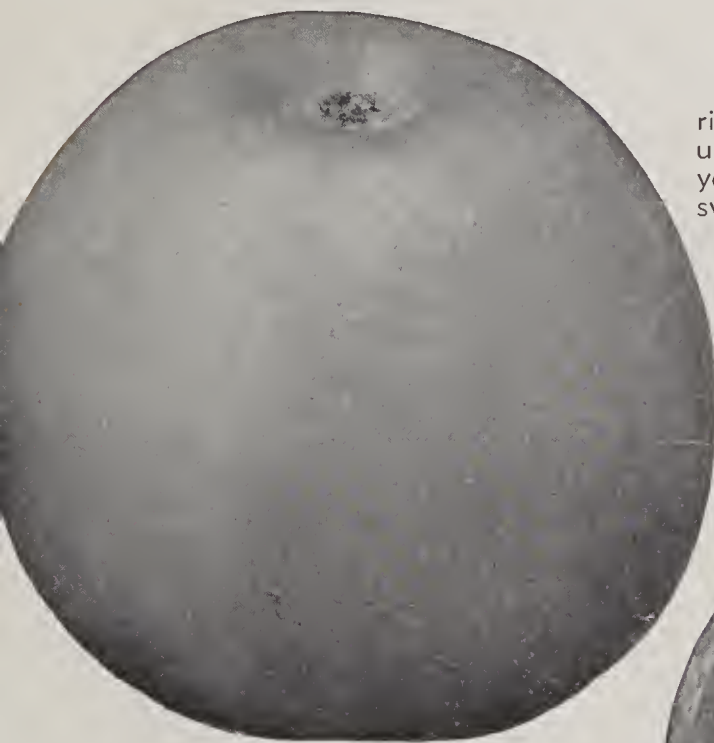

AMERICAN FILBERT (Hazelnut). This is the family favorite. This nut does not grow into a tree, rather a bush, and bears tasty round nuts. Bushes grow fast and bear young, yielding abundant crops year after year. Bushes very hardy. 3 to 4 ft. bushes, \$1.00 each; 3 for \$2.75.

BLACK WALNUT. This is the common black walnut, which will grow anywhere, and is always a favorite. Bears large nuts, which are valuable in making cookies, cakes and candies. The kids will eat them as fast as you can crack them. Trees, 2 to 4 ft. tall, 25c each; 3 for 65c; 6 for \$1.20; 10 for \$1.85.

BUTTERNUT. This is the common Butternut that will grow most any place like the Black Walnut will. The nuts are oblong, and are also valuable to use in cooking. 3 to 4 ft. trees, 25c each; 3 for 65c; 6 for \$1.20; 10 for \$1.85.

Black Walnut

Yellow Transparent

YELLOW TRANSPARENT

The very finest extra early Apple. It ripens late in July and continues in season until September. Fruit of good size, waxy yellow color. Flesh white, mild, juicy, and sweet.

ORANGE QUINCE

We list only this one Quince as we consider it by far the best. The trees commence to bear very young and produce big crops. Fruit is excellently flavored and of large size. **2-yr.-old trees, each, \$1.00; 3 for \$2.75.**

Snow

SNOW (Fameuse)

Well known early winter Apple. Snow-white flesh, from which it takes its name. Medium size. Deep crimson in color. Juicy and very pleasant to eat out of hand. Fills in the gap between early fall Apples and late winter Apples. Tree very hardy and productive. November to December.

TURLEY WINESAP

The Turley is gradually winning its way solely on its merits. The variety originated in Indiana and is much esteemed by the growers of that state as a commercial Apple. The tree is vigorous and bears fruit early—5 or 6 years from date of planting. The fruit is very red and inclined to be large. Season just before Stayman's Winesap.

JONATHAN

The color of the fruit is bright red, the flesh is white, firm, crisp, tender and juicy. It is a very beautiful Apple, and one of the very best eating Apples. Not such a good cooker. It is one of the most desirable varieties for the holiday season. Good keeper. Trees are hardy and bear very young.

McINTOSH

Medium in size. Fruit is beautiful red, somewhat striped. Flesh is white, crisp, and highly flavored. The tree is hardy and vigorous, and starts to bear young, and heavy. It is a favorite market and eating Apple. Ripens in September and October. Not a keeper.

Turley Winesap

Tree Fruits

Apple, Apricot, Pear, Peach, Plum, Quince and Cherry Trees

GENERAL DIRECTIONS

PLANTING. Make soil mellow by thorough plowing or spading at least 10 to 12 inches deep. This is important to give new roots a chance to spread naturally. Use mellow top soil in bottom of hole and around roots, packing very carefully to leave no air spaces. When roots are barely covered, put in enough water to thoroughly moisten and settle soil among roots; then fill hole with soil, pressing firmly and watering again. Be sure to set the tree a little lower than it was in the nursery row. Keep soil loosened during growing season by hoeing.

Trees on strong soil should be slightly farther apart than on medium soil. Apple trees should be planted 24 to 33 feet apart; Pear 20 to 27 feet; Cherry (sweet) 20 to 27 feet; Cherry (sour) 16 to 20 feet; Peach 16 to 20 feet; Plum 15 to 20 feet.

McIntosh

SOLID RED DELICIOUS

This variety is like Delicious in every respect excepting that it has added color. As the name implies this is a solid red, highly colored Delicious. It is recommended especially for locations where Delicious does not have sufficient color. The tree is hardy, healthy, vigorous and bears regular annual crops. Flesh is fine grained, crisp, melting and juicy. Quality is very good and the season is November to March. Delicious is a wonderful eating Apple.

NORTHERN SPY

A strong, vigorous tree, early bearing, heavy annual production, large size in fruit and an attractive typical striped color type. The fruit is large and extremely attractive. Color, bright red with indistinct stripings. Flesh, very juicy, crisp and tender and most excellent for either dessert or culinary uses. Season, November to March.

New HARALSON

This new variety stands in a class by itself on account of its hardiness. It is the coming Apple for the cold Northwest. Comes into bearing very early in life, and is a vigorous grower. Fruit is good size, red and long keeping. Very good eating Apple. If you are looking for an Apple that will bear where it gets 40 degrees below zero, order Haralson.

Dolgo Crab Apple

Haralson

**Dolgo
Crab
Apple**

The perfect Crab. Hardy everywhere. Heavy bearer, usually beginning the year after setting. Jells perfectly even when dead ripe. A fine ornamental tree for the lawn as well as a wonderful commercial sort. Rapidly displacing such varieties as Transcendent and Hyslop. **\$1.00 each; 3 for \$2.80.**

Hale-Haven

MARVELOUS New Peach

This marvelous new Peach was introduced through the efforts of the Michigan State Experiment Station, South Haven, Michigan (Mr. Stanley Johnson, Supt.). It is a cross between the famous varieties South Haven and J. H. Hale. A large, beautifully colored, yellow-fleshed Peach, ripening approximately 2 weeks before Elberta. A perfect freestone, strong, thrifty grower, splendid shipper and an extremely hardy, heavy bearer of exceptionally fine flavor. The Hale-Haven has extremely high calar and colors highly on the trees several days before it is ripe, thereby permitting picking while rather green, far distant shipments. Test trees produced full crops this year at the Experiment Station when crops of many other standard varieties were a failure due to low temperatures last winter. This variety will make you big money and should be included in every planting. **Prices:** 9/16", 2-yr., 3 1/2 ft. up, each, 50c; 3 for \$1.40; 6 for \$2.50; 10 for \$4.00; 25 for \$9.00; 100 for \$35.00. 3-yr., \$1.00 each; 3 for \$2.70.

HARDEE U. S. Plant Potent No. 120

**HARDEE TREE HAS BUMPER CROP AFTER 1934'S
LONG 18° BELOW ZERO**

**Scientists Hail HARDEE as the Most Important
Peach Discovery in Past 25 Years**

Actual photograph of Hardee fruit. The fruit is described by the Ohio State authorities as being "large to above large. The fruit is slightly elongated and characteristically painted. It is an Elberta type, ripening with Elberta and a little later. It is yellow, freestone, highly colored and with firm flesh of the best quality." Its thick skin makes it an excellent shipper. The flavor of the fruit is distinct and delicious. It has a very real peach flavor. The tree habit and vigor of growing is good indeed and may be classed as intermediate between Elberta and J. H. Hale. This Peach is sold under license of the patent holder.

South Haven

This variety is the hardiest of all commercial Peaches. It is not only a very good commercial Peach, but extra fine for canning and table use. Our South Haven are from selected buds and are of a high yielding strain. The fruit is large, round, very uniform in size. Flesh is yellow. Color of skin is deep yellow with red cheek. Freestone. Ripens about 18 days before Elberta, and at just the right time to bring big market prices. It is absolutely the best canning Peach. South Haven makes a good variety to plant with others to help pollinize.

J. H. Hale

Our high type of super-selected strain of J. H. Hale, is the finest that can be had. Through this bud selection, we have a J. H. Hale that will produce the typical large round type of fruit that is desired instead of the long shape in so many J. H. Hale. Our J. H. Hale ripens about 3 days earlier than Elberta. Fruit extra large, golden yellow with deep carmine flesh. Freestone. Excellent quality and flavor. Trees grow large and bear young. Hardy. Does best when grown with South Haven.

Elberta

The fruit is very large, orange-yellow color, overspread with red. Flesh is yellow with red near the pit. Freestone. Juicy, firm yet tender and fine for canning. Sweet and mild. Ripens about Sept. 10th to 20th, depending of course on the season.

Golden Jubilee

Of all the many new Peaches originated by the New Jersey Experiment Station, none have aroused the interest of fruit growers as this variety. It is a large yellow Freestone Peach, and is the most popular early yellow Peach. It ripens about 4 weeks before Elberta, and is a real money-maker, as well as a wonderful table Peach. Tree habits are like Elberta. The skin is yellow flushed with red. Flesh yellow, juicy, tender, sweet, and FREESTONE. Try one or two in your home orchard or garden.

UNDERWOOD

This is the earliest of the large new Plums. Ripens from about August 1st to 15th, and attains a size of 1 3/4 inches. The tree is one of the strongest growers of all these new Plums and gets to be very large, furnishing a large bearing surface to produce wonderful crops of beautiful fruit. Fruit is very attractive; red, firm, juicy flesh, very small pit, freestone. Splendid quality.

YELLOW EGG

Fruit very large, prune shaped, yellow with red dots. Fine for the table or cooking. Ripens last of August.

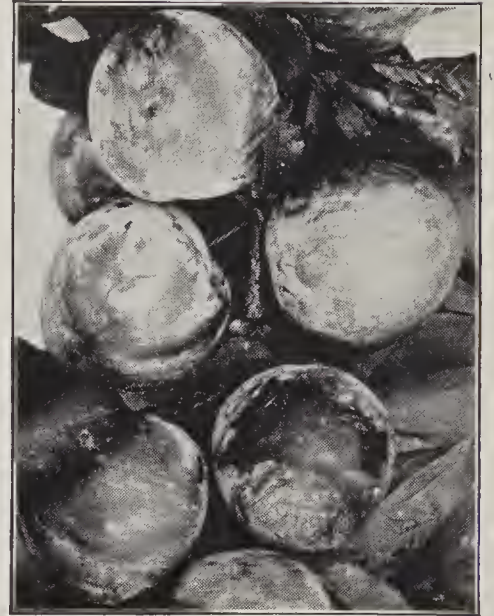

GERMAN PRUNE

The most delicious of all Plums. Extra large size, often 2 inches in diameter. Early and abundant bearer. Combines hardiness, immense size, delicious quality, long keeping, beautiful color, small pit. An early and prolific bearer, often producing a good crop in 2 years after planting.

Stanley Prune

HARDY PLUMS

Yellow Egg—1/4 actual size

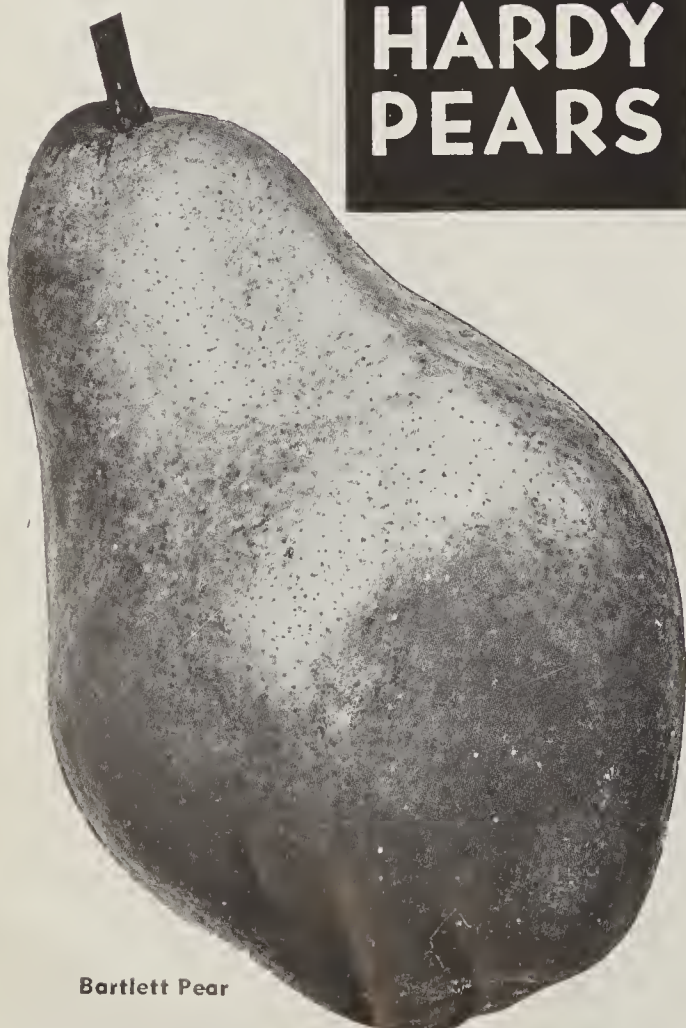

STANLEY PRUNE

This variety is a cross between Agen and Grand Duke. Excellent for cooking or eating out of hand. The tree is healthy, vigorous, and produces full crops annually. The fruit is large in size, prune-shaped, dark blue with thick bloom; flesh greenish yellow, juicy, fine grained, tender, firm, sweet, pleasant; quality good to very good; stone free; midseason. This is one of the outstanding new varieties. Prices: 1 yr., each 75c; 3 for \$2.15; 10 for \$6.00.

NOTICE:—We have a limited supply of 3-year-old, bearing-age Plum trees in the following varieties: Underwood, Waneta, German Prune, Yellow Egg, Burbank, Reine Claude (Green Gage). Price, \$1.25 each.

Stromer's Fruit Trees are Prolific

HARDY PEARS

Bartlett Pear

BARTLETT

The most popular Pear for home use and market, a leader among canning Pears. Should be in every garden and orchard. Large, golden yellow with reddish blush on the sunny side. Flesh tender, melting and juicy, with a delicious, musky flavor. Tree vigorous, erect, bears abundantly.

The New DOUGLAS

Claimed to be blight proof and cold resistant. Bears early, often same season planted and produces a heavy crop. A regular cropper in all soils and localities. Fruit large, smooth; beautiful golden yellow color; flecked with red and russet. Flavor delicious, very sweet, melting and juicy. Something new and better.

SECKEL or Sugar Pear

The best pickling Pear. Fruit small, fine favor and firm. Heavy cropper.

SOUR Cherries

MONT-MORENCY (Pie Cherry)

This is one of the best of all pie Cherries. It ripens about 10 days later than Early Richmond. Fruit extra large, bright shiny red, firm flesh, juicy, and a fine home use and market variety. Trees grow strong and are perfectly hardy. They bear in 2 or 3 years, and continue to do so for many years.

EARLY RICHMOND (Pie Cherry)

This is the earliest of all pie cherries. Fruit is medium large, bright red and juicy. Ripens early in June. Fine for canning and pies. Starts to bear very young, and is very hardy. The kids will thank you if you plant a tree or two of this variety. Nothing will be more popular with them than a tree full of Early Richmond in early June. Ripen with strawberries.

Early Richmond

Sweet September, 1/2 actual size

SWEET SEPTEMBER (New Fall Bearing Cherry)

Ripens September First and hangs until the snow flies.

The young trees start to yield some fruit the second or third year after planting and produce heavy annual crops thereafter. There is no previous record in the history of Horticulture of a fall-bearing Cherry until the accidental discovery by an amateur horticulturist in northeastern Ohio of this sweet Cherry tree which for some unknown reason ripened its fruits in September instead of June. The tree blossoms at the same time as other standard varieties and is apparently hardier in the bud than the average sweet Cherry. The fruits are an attractive medium dark red similar to Windsor, the standard variety which it most nearly resembles, and the quality is excellent for eating fresh and for canning.

It is a remarkable fact that the original tree, which now stands about 30 feet high and approximately the same measurement across, has produced a crop year after year, even as high as 15 bushels as it did in 1932, with practically all fruits sound and perfect in every way—no worms, rot or leaf spot—without ever having been sprayed.

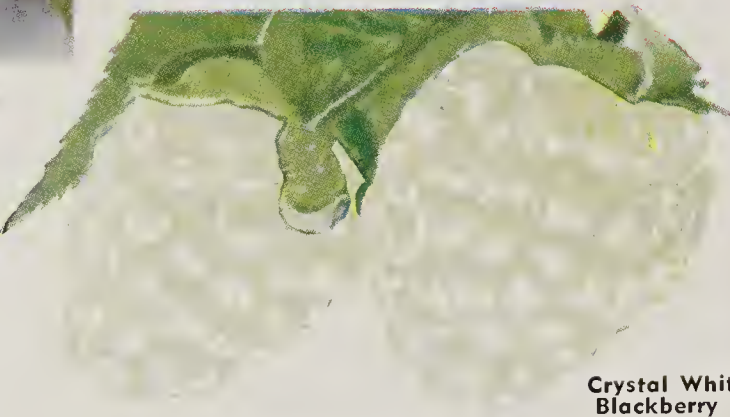

Here is a fruit that every home owner should have in his dooryard to extend the season for sweet Cherries through the late summer and autumn.

Prices: 2-yr., 9/16 in., \$1.50 each; 10 for \$14.50. No discount.

Value

CRYSTAL WHITE Blackberry

Strange as it may seem, this is a real creamy white Blackberry. Mixed with the jet black ones for dessert, it makes a most wonderful dish. The fruit is about the size of Alfred, with few seeds and quite sweet when fully ripe. The bushes are good, strong growers and very productive. This is not a worthless novelty, but a fruit of real value, and should be in every garden.

HANSEN BUSH CHERRY

The New QUICK-BEARING CHERRY

EASY TO GROW - - SURE TO PRODUCE

Highly Productive - - Good Flavor - - Hardy Everywhere

Though the fruit of this new Cherry much resembles a Plum in size and shape, it comes messed in clusters and at times almost completely covers the limbs. The tree itself grows in a sort of dwarf bush-like shape, rarely getting over four or five feet tall. In landscape planting these Bush Cherries are also desirable as they are of striking ornamental value.

Prices: 50c each; 3 for \$1.00; 10 for \$2.95.

Plant These Hansen Bush Cherries Because:

- 1—They are so easy to grow and are perfectly hardy everywhere.
- 2—Are good to eat fresh, and make delicious preserves.
- 3—Bear from the ground up, early, heavy, and annually.
- 4—Are dwarf growing, bushy, and take up little room.
- 5—Excellent for hedges, ornamental shrubs and erosion control.

BUDDLEIA, Ile de France

Of quick bushy growth; when the lovely bloom-spikes appear in July, the shrub, which had probably died down nearly to the ground during winter, is now a perfect, well-branched specimen of about 5 feet; radiating a delightful perfume and glowing with tints and shape of the spring Lilacs. A sensational new variety, of more uniform moderate growth, and greater brilliance of color in the bloom. Thick flower spikes 6 to 9 inches long, sweetly fragrant; rosy purple with a deep violet suffusion. **Pot-grown plants, will bloom this year, each, 30c; 4 for \$1.00.**

Mixed Gladiolus

MIXED GLADIOLUS

This collection is made up of twenty different varieties and colors. We offer you blooming-size bulbs. This mixture is just a little better than the average mixture that is offered. **We offer you 75 fine sure-to-bloom bulbs for \$1.00; 25 for 50c; 100 for \$1.25.**

ADAMS' IMPROVED ELDERBERRY

This is a great improvement over the common Elderberry. The fruit and blossoms are much larger and of much better quality. The fruit and blossoms are valuable for wine making. The fruits are very fine for pies and jellies. Bears young.

Prices: 2-yr.-old, 12- to 18-in. plants, each, 40c; 3 for \$1.10.

WILDER CURRANT

A real improvement in Currants. Big berries in long, well-filled bunches. Bushes thrifty and very productive. Brings top prices. A splendid money-maker. Fine for jellies and pie. **2-yr. No. 1 plants, each, 35c; 2 for 60c; 10 for \$2.70; 25 for \$6.25; 100 for \$15.00.**

Champion GOOSEBERRY

Very large berries of delicious flavor produced freely on the sturdy, hardy bushes. Best pie variety. **2-yr. No. 1 plants, each, 35c; 2 for 60c; 10 for \$2.70; 25 for \$6.25; 100, \$15.00.**

Superb APRICOT

A hardy tree and a sure cropper. The best flavored, most productive hardy Russian Apricot yet produced. Medium size, light salmon color. **2-year-old, 9/16 in. and up, each, 70c; 3 for \$2.00; 6 for \$3.75; 10 for \$5.50.**

JAPAN QUINCE

(Cydonia Japonica)

These rank among our choicest shrubs. Although of straggling growth they bear the knife well and may be trimmed into any desired form. As single shrubs they are very attractive and are also adapted for ornamental hedges. Their brilliant flowers are among the first to appear in spring, covering every branch and twig in the greatest profusion. Foliage a bright green, retaining its color the entire summer. **2-yr., 18-24 inch plants, each, 35c; 3 for \$1.00.**

BLUE HYDRANGEA

This Hydrangea has been the most desired of all the Hydrangeas offered to the trade. It blooms in great profusion.

This Hydrangea is a Japanese type that blooms pink flowers on the 1-year stems, followed by blue flowers on the 2-year-old wood. In other words, it is necessary to have 2-year-old wood to have the blue Hydrangea. **2-yr. No. 1 plants, each, \$1.00; 2 for \$1.75.**

Blue Hydrangea

Flowering Shrubs

SPIREA VAN HOUTTEI

Sometimes called Bridal Wreath. Branches droop to the ground with small white flowers early in the spring. Foliage makes it beautiful all summer. 1-1½ ft. plants, 2-yr., 10c each; 3 for 27c; 10 for 85c; 100 for \$6.00. 3-4 ft. size, each, 35c; 3 for \$1.00; 10 for \$2.50.

WEIGELA ROSEA

Showy, trumpet-shaped flowers of rose-pink cover this broad bushy shrub from May to July. It grows 5 to 6 ft. tall and is one of the good shrubs. Lovely flowers and attractive foliage. Easy to grow. 2-yr.-old, 18 to 24 in. tall, each, 25c; 3 for 70c; 10 for \$1.90.

HONEYSUCKLE, TARTARIAN

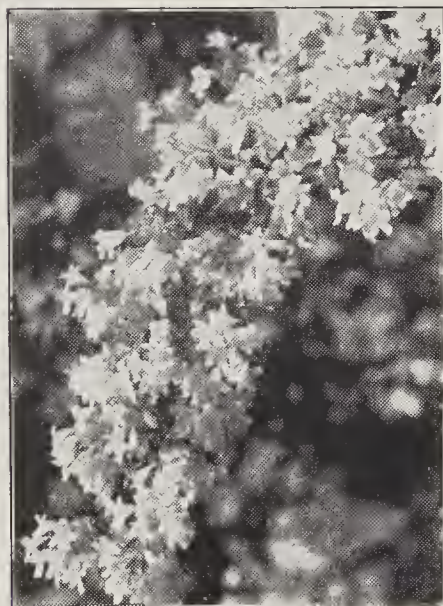

One of the very best tall growing shrubs. In May and June it is covered with pink flowers, followed by many clusters of red and orange berries. Hardy everywhere and grows in sun or shade. As it makes a shrub 8 to 12 ft. tall, it is exceptionally fine for screen, hedge or background. 2-yr.-old, 18-24 in., 35c each; 3 for \$1.00.

SYRINGA, VIRGINAL

This is the best Mock Orange. The flowers are very large, pure white, and so fragrant that just a spray will perfume an entire room. Blooms very profusely in June, with scattering flowers through the summer. It is unquestionably one of the very finest white flowering shrubs and belongs in every yard. Grows everywhere and makes a bush 5 to 6 feet tall. 2-yr., No. 1, 18-24 in., 35c each; 3 for \$1.00.

SPIREA ANTHONY WATERER

Crimson flowers in large, flat clusters. Blooms early and continues till fall. 12-15 in., 20c each, 3 for 50c; 6 for 95c.

BEAUTY BUSH (Kolkwitzia)

A new Chinese shrub. Soft green leaves tinted with bronze. Clear pink, bell-shaped flowers, with brown markings. Very hardy. 1-1½ ft. plants, 35c each; 3 for \$1.00.

ALTHEA ROSE OF SHARON

Strong, erect-growing shrubs of easiest culture, perfectly hardy and a prolific bloomer. Large showy flowers in late summer when few other shrubs are in bloom. Assorted colors. 2-yr., 18-24 in., 35c each; 3 for \$1.00.

PERSIAN LILAC

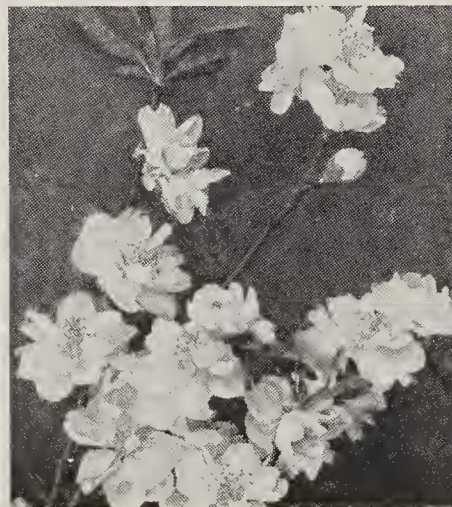

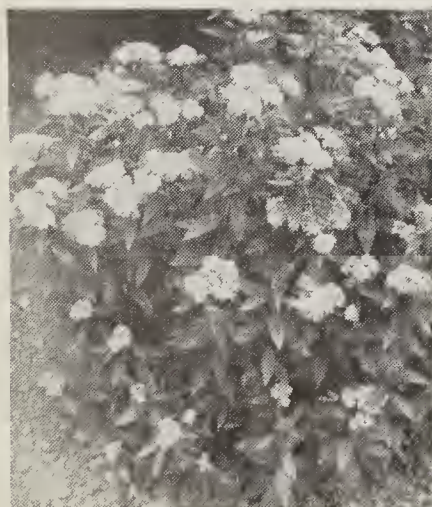

A decided improvement over the common Lilac. Does not sprout so much from the roots. Height 5 to 10 feet. Flowers bright purple. Blooms in May and June. 1-1½ ft. plants, 25c each; 3 for 70c; 10 for \$1.98.

WITCH HAZEL

Valuable because its fringe-like yellow flowers open in November. Grows 10 to 15 feet tall, with fine leaves that color to yellow, orange or purple in fall and drop before the bright yellow flowers appear. Likes a moist sandy or peaty soil and partial shade. 2-yr., 12-18 in. tall, 40c each; 3 for \$1.10.

HYDRANGEA P. G.

Flowers extra large, white turning to pinkish purple. Makes fine winter bouquets. Blooms July to October. Very hardy. 1½ ft. plants, 20c each; 3 for 55c; 10 for \$1.50. 18-24 in., 35c; 3 for \$1.00.

FLOWERING ALMOND

Pink. Small shrubs, upright branches covered with double pink flowers in May. Blooms before leaves come. 1-1½ ft. plants, 25c each; 3 for \$1.00.

CRANBERRY, HIGH BUSH

Handsome shrub with flat clusters of white flowers in April-May followed by scarlet berries which hang on all winter. Grows tall, in either sun or partial shade. 2-yr., 18-24 in. tall, 40c each; 3 for \$1.10.

SPIREA BILLIARDI

A grand shrub for group and foundation planting. Long spikes of deep rose-colored flowers from June to September. Grows 4 to 5 feet tall. 18-24 in., 30c each; 3 for 85c.

SPIREA, KOREAN

A new Spirea that blooms two weeks after Van Houtte. It is then a perfect mass of the lovely white flowers. It retains its beautiful glossy green foliage until very late in the fall. It grows 5 feet tall and is rated as one of the finest shrubs. 3-4 ft. size, 40c each, 3 for \$1.10; 10 for \$3.00.

SPIREA ARGUTA MULTIFLORA

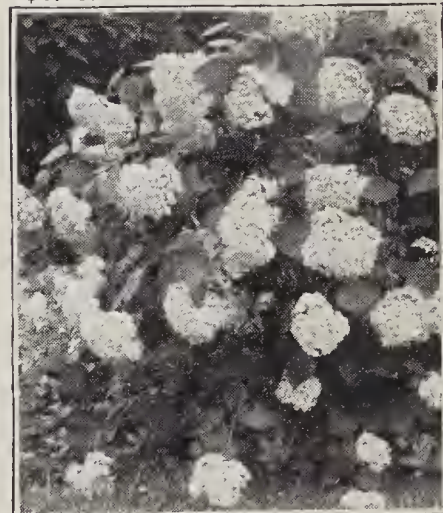

(Snow Garland). A slender, upright shrub, with branches a snowy mass in early May. First Spirea to bloom, in wavy vertical lines, flat white. 3-4 ft. size, 35c each, 3 for \$1.00; 10 for \$2.50.

SNOWBALL

The grand old shrub from our grandmother's garden. In early spring it is simply covered with hundreds of the pure snow white balls. Makes a tall shrub, growing in sun or partial shade. 2-yr., 18-24 in., 50c each; 3 for \$1.40.

FORSYTHIA (Golden Bell)

What a bright spot this shrub makes in the landscape early in the spring! It is the first to bloom and lights up the whole yard with its masses of bright yellow flowers. Grows 6 to 8 ft. tall. 2-yr., 18-24 in., 25c each; 3 for 70c; 10 for \$1.90.

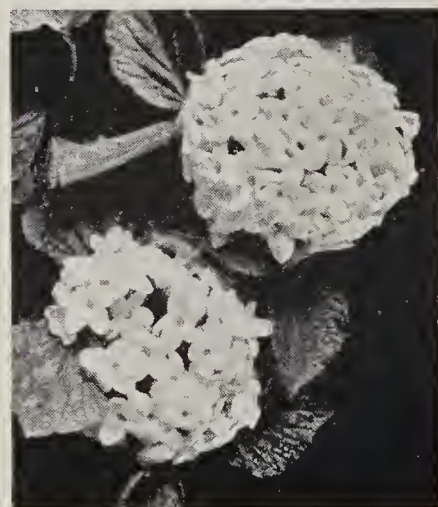

HYDRANGEA A. G.

(Hills of Snow). Resembles the old-fashioned Snowball bush. Large blooms that open in June and last all summer. 1-1½ ft. plants, 20c each, 3 for 55c; 10 for \$1.50. 18-24 in., 35c each; 3 for \$1.00.

VIBURNUM CARLESI

Wonderful new shrub. Its fragrance resembles Trailing Arbutus. Will bloom early in spring, thrives best in partial shade, cool moist soil. 75c each; 3 for \$2.00.

Trees

FLOWERING DOGWOOD

CORNUS FLORIDA (White Flowering Dogwood). Flowers white, 3 to 3½ inches in diameter, in spring before leaves appear. Spreading, irregular form, growing 20 to 25 feet high. Used in tall shrub backgrounds and corner groups, sparkling white bloom in spring, and crimson autumn foliage. 2 to 3 ft., 75c each.

CORNUS FLORIDA RUBRA (Red-Flowering Dogwood). Slower growing and more formally shaped, with handsome rose-red flowers. An attractive lawn specimen or group subject. As we grow them, these small trees are among the most popular of all the "fancy" types for group association with such kinds as the Cherries, Crobs, and Thorns. 3 to 4 ft., \$2.00 each.

CHINESE ELM SHADE TREE

One of the most rapid growing trees. Very durable and hardy. Slender, tough branches. Compact habit of growth with small attractive leaves. Highly recommended for street planting. Grows anywhere, and is one of the best for dry climates. 6-8 ft., \$1.25 each.

AILANTHUS

(Tree of Heaven). An extremely rapid grower with brilliant green, palmlike leaves. Thrives in city lots exposed to gas and smoke, and in soil where other trees perish. 6-8 ft., \$1.25 each.

LOMBARDY POPLAR

A tall, shaftlike column that grows quickly. Makes a fine effect planted along drive-ways. 4-5 ft. trees, each, 30c; 2 for 55c; 5 for \$1.25; 10 for \$2.00.

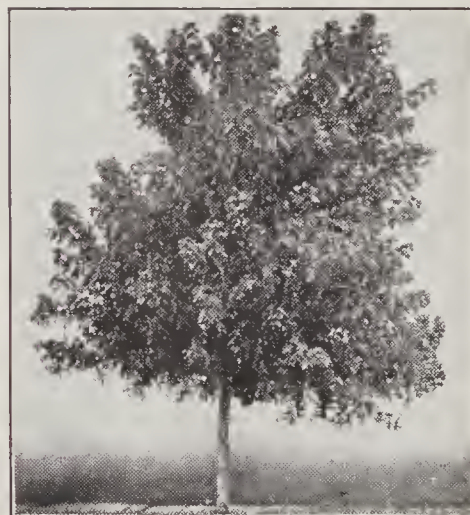

CHINESE ELM HEDGE

The very finest of all hardy hedges, stands 40 degrees below zero, does equally well on very low or very dry soil, can be trimmed or left natural for windbreak. 12 to 18 in., 10 for 45c; 50 for \$1.75; 100 for \$3.50.

CUT-LEAF WEEPING BIRCH

A graceful white-barked tree with drooping limbs, and cut-leaf foliage. For lawn and park. 5-6 ft. trees, \$2.00 each.

SILVER MAPLE

Rapid growing, producing quick shade for street and park. Leaves are indented, bright green above and silver beneath. 5-6 ft., 55c each; 2 for \$1.00.

FRENCH PUSSY WILLOW

(S. discolor). A small tree with attractive leaves 2 inches long by one inch wide. Its popular appeal is the conspicuous silky catkins which bud in the fall, and make such delightful "springy" bouquets just as the snow is melting. 4 to 5 ft., 55c each; 3 for \$1.50; 6 for \$2.70.

NIOBE WEEPING WILLOW

A large tree with long, drooping branches. Very hardy. Fine for parks and near rock gardens or along streams. 4-5 ft., 60c each; 2 for \$1.00.

Hardy Hedges

100 ft. of Hardy Hedge for \$5.25; 12-18 in. Tall **AMOR RIVER NORTH PRIVET**. This is the hardiest of all hedges, and one of the most beautiful. Foliage dark glossy green. Leaves stay on long into the winter. Fine white flowers with berries later on. Set 1 foot apart. 10 for 75c; 50 for \$3.00; 100 for \$5.25; 250 for \$10.00; 500 for \$19.00.

BARBERRY, THUNBERG'S GREEN. Perfectly hardy. Rust-proof. Bright green foliage turning to a dazzling red in autumn, followed by red berries. Very beautiful. Grows in all soils. May be pruned, or makes a beautiful hedge not trimmed. Also fine for specimen bushes or borders. Strong, 2-yr., 12c each; 10 for \$1.00; 100 for \$5.95; 250 for \$11.00; 500 for \$21.00.

RED BARBERRY. Makes a beautiful specimen bush as well as hedge plant. Foliage purple to a bright red. Produces a brilliant appearance in any landscape. 15-18 in., 2-yr., each, 20c; 6 for \$1.00.

Decorative Vines

Hall's Japan Honeysuckle

Its fragrant white and yellow flowers are produced freely almost all summer and the leaves remain green almost all winter. Grows vigorously in sun or partial shade. Fine for porch, fence, and covering cave or bank. 2-yr. No. 1 vines, each, 25c; 3 for 65c; 10 for \$2.10.

Clematis Jackmani

A gorgeous vine that produces its immense royal purple flowers (4 to 6 inches across) nearly all summer. You have always wanted one of these beautiful vines. 2-yr. No. 1 vines, each, 60c; 3 for \$1.70.

Boston Ivy

(Japanese Creeper; Amp. Veitchi). Clings to the smoothest surface without support, completely covering it with overlapping leaves. Foliage turns crimson in the fall. Prefers partial shade. 2-yr. No. 1 vines, each, 35c; 3 for \$1.00. 3-yr. No. 1 vines, each, 75c; 3 for \$2.00.

True Bittersweet

Produces bright orange-red berries that are so popular for winter bouquets. Grows in sun or partial shade. Plant 2 or 3 vines so they can cross-pollinate, giving lots more berries. 2-yr. No. 1 vines, each, 35c; 3 for \$1.00. 3-yr. No. 1 husky vines, each, 60c; 3 for \$1.70.

Silver Lace Vine

From the middle of summer until late fall, it is completely covered with snowy white flowers. The glossy green foliage is also attractive. Unsurpassed for porch and arbor. Will give flowers and shade the very first season, as it generally grows 15 to 20 feet the first year. Planted the country over. We have reduced the prices on our strong, two-year, field-grown plants. 2-yr. No. 1 vines, each, 55c; 3 for \$1.25.

Giant Purple Wisteria

The most magnificent of all vines. Lilac-purple flowers in long clusters in June and July. Our plants are grown from blooming wood so you will get the true flowering type that will bloom the next year after planting. Plants grown from blooming wood. 2-yr. No. 1 vines, each, 40c; 3 for \$1.10. 3-yr.-old, each, 75c; 3 for \$2.00.

Chinese Elm

The New Fast Growing Tree for Shade or Hedges

The Chinese Elm as a tree comes from the cold dry regions of Northern China and Southern Northeastern Siberia. It is consequently very hardy and a splendid tree for use in the drier portions of our country. Since its introduction but a few years ago it has gained a wonderful popularity and is now growing all over the United States. No new tree ever grew into popular favor so rapidly. It is a beautiful tree with fine elm-like foliage which appears very early in the spring and remains long into the fall and until most other trees have dropped their leaves, at the same time taking on wonderfully rich tints of color. It is a very rapid growing tree and soon makes a large tree 60 feet tall.

Naturally it limbs close to the ground and because of this fact and its dense limb growth it makes a wonderful windbreak tree. For windbreak purposes no other tree can be found that will compare with it. Because of its rapid growth and its great beauty, it is especially adapted to street planting and for individual trees on the lawn. Since the introduction of the Dutch Elm disease the chances are that our American Elm are doomed. The Chinese Elm is said to be immune from the Dutch Elm disease.

It is not necessary to buy large Chinese elm shade trees because our trees will grow so rapidly. You can soon have a fine shade tree by buying these smaller size trees.

Chinese Elm Shade Tree

Chinese Elm Hedges

The Chinese Elm Grown Bushy for Hedge Purposes

It is found after thorough trial that the Chinese Elm makes one of the finest of hedges. Especially desirable for states of slight rainfall and where extreme hardiness is required. The hedge limbs clear to the ground, is a bright rich green from very early in the spring, as it is much earlier than other hedges and carries its foliage, which colors with frost, way into the fall. Trim same as Privet or other similar hedges.

We believe Chinese Hedgewood is going to take the place of Privet as a hedge for the entire northern part of the country. Plant 1 foot apart.

A Chinese Elm Hedge

Grow Your Own EVERGREENS

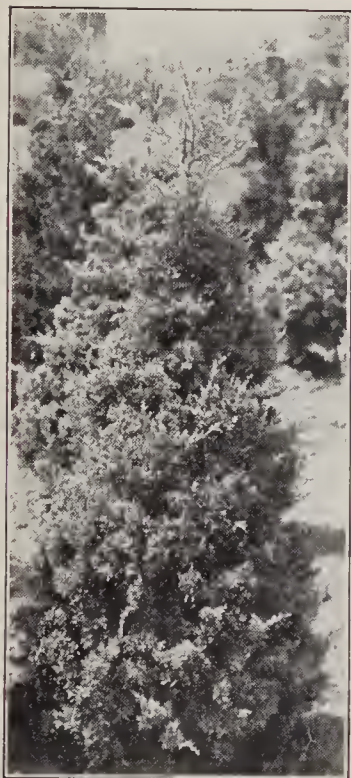

Irish Juniper

IRISH JUNIPER. The Irish Juniper is well known for a pyramidal or columnar growing tree. Very dense foliage with silvery green color. Fast growing and attractive. 2-yr.-old, 8 to 10 in. toll, each, 60c; 2 for \$1.10.

VIRGINIANA JUNIPER. This native variety when trimmed makes a very attractive tree and thickens its foliage more by shearing. Can be made to grow in a pyramidal form. 4 to 6 in. seedlings, each, 15c; 2 for 25c; 5 for 50c; 10 for 90c; 25 for \$2.00; 100 for \$7.50.

AUSTRIAN PINE. A lone needle Pine of fast growth. A fine specimen tree or can be used in foundation if kept trimmed back. These trees thrive in any locality or location. 4 to 6 in. seedlings, each, 15c; 2 for 25c; 5 for 50c; 10 for 80c; 25 for \$1.75; 100 for \$6.50.

Virginia Juniper

Norway Spruce

PYRAMIDAL ARBOR-VITAE. This variety has dark green foliage. Very hardy. Grows thick and makes a pyramidal growth from the ground up. Does not get very broad at the base, but grows naturally in a columnar shape. 2-yr., once transplanted, 4 to 6 in., each, 25c; 2 for 45c; 5 for \$1.00; 10 for \$1.80; 25 for \$3.75; 100 for \$14.00.

GLOBE ARBOR-VITAE. Round, bushy, compact. Hardy. Dwarf. 2-yr., once transplanted, 4 to 6 in. spread, each, 25c; 2 for 45c; 5 for \$1.00; 10 for \$1.80; 25 for \$3.75; 100 for \$14.00.

NORWAY SPRUCE. Dark green foliage throughout the season, always holds its color well, grows well in most any location. Very hardy and moderate in price, and easy to transplant. 4 to 6 in. seedlings, each, 10c; 5 for 40c; 10 for 60c; 25 for \$1.25; 100 for \$3.50; 1000 for \$30.00.

COLORADO BLUE SPRUCE. A very hardy evergreen. One of the most beautiful for landscape work. Foliage is greenish blue to silvery blue. Colorado Blue should be set in open sunlight, not too near other trees and buildings for best color. 2 to 4 in. seedlings, each, 15c; 5 for 60c; 10 for \$1.00; 25 for \$2.00; 100 for \$4.74; 1000 for \$40.00.

Globe and Pyromid Arbor-Vitae

Pfitzer's Juniper

SAVIN JUNIPER. Dark green foliage; grows low and thick; forms a border for taller growing evergreens in foundation planting. Hardy and holds good color in winter. 2-yr., 4 to 6 in. spread, once transplanted, each, 30c; 2 for 55c; 5 for \$1.25; 10 for \$2.25; 25 for \$5.00; 100 for \$17.50.

PFITZER JUNIPER. One of the most important Evergreens of today. It is a Juniper that thrives under many conditions; it does well in open sunny places as well as in shady or protected places. Forms a thick bushy mass of silvery foliage. 3-yr., 8 to 10 in., twice transplanted, each, 50c; 2 for 90c; 5 for \$2.00; 10 for \$3.75; 25 for \$7.00.

Mugho Pine

MUGHO PINE. Dwarf Pine of low, thick, bunched habit. Dark green foliage throughout the season. Very hardy and holds its color well. Used extensively in rock gardens. 2-yr.-old, 3 to 4 in. spread, once transplanted, each, 15c; 2 for 25c; 5 for 50c; 10 for 95c; 25 for \$2.00.

Austrion Pine

Colorado Blue Spruce

HONEYSUCKLE "GOLD FLAME"

Immense, showy clusters of trumpet-shaped buds and fragrant blooms. Outside of petals brilliant flame-pink, while the inside is a creamy golden yellow. Dark glossy foliage. Blooms freely from early spring until cut down by heavy frost. Each, \$1.00; 3 for \$2.50, postpaid.

CONCOLOR SILVER FIR. This variety of fir has silvery blue foliage, and is one of the cheeriest of all evergreens in the winter as well as in the summer. One of the best of evergreens to withstand severe drought, and cold winters. Grows like the Colorado Blue, but without the Spruce stiffness. Prices: 2-yr.-old, once transplanted, each, 15c; 2 for 25c; 5 for 50c; 10 for 80c; 25 for \$1.75; 100 for \$6.50.

JAPANESE YEW. Upright. The green waxy foliage appeals to everyone. This yew can be trimmed to any size and shape. It fits in well in most plantings. The yew likes shady places, and may also be grown in sunny locations. Bears bright red berries which add to the beauty of the plant. Prices: 2-yr. old, once transplanted, 4 to 6 in., each, 30c; 2 for 55c; 5 for \$1.25; 10 for \$2.25; 25 for \$5.00; 100 for \$17.50.

JAPANESE SPURGE. A broad leaf evergreen plant. Grows 6 in. high and forms a mat-like growth all over the ground. Fine for under-planting, and makes a wonderful ground cover to hold moisture. Makes an ideal window box plant both for summer and winter. 3-yr., twice transplanted, each, 25c; 2 for 45c; 5 for \$1.00; 10 for \$1.85.

Boysenberry

Boysenberry is the sensational new berry. It was introduced in 1932 in California. It is a cross between the California Loganberry, Raspberry, and Blackberry. Think of a berry that has a little of each of these fruits all in one giant, nearly seedless, beautiful wine-colored berry, with a flavor that you will never forget. They are sweet and juicy, yet firm enough to stand handling and shipping to market. The vines are hardy, and can be grown in the east and north, as well as in California and other southern states.

Enormous Size

From a recent publication by the United States Dept. of Agriculture is the following statement: "Under favorable conditions, 50 berries of the largest berries will fill a quart box." Of course these 50 berries would have to be selected, and would not be the average. We would say that 75 to 85 berries would be average.

Profitable

Whether you are growing berries for market or just a few in your garden, it will pay you well to get started right now. A dozen plants will be plenty for home use. 600 plants will set an acre, set 8 ft. by 8 ft.

Growing Suggestions

The BOYSENBERRY is a vine. It should be set 8 ft. apart each way. This is because it is a rank grower. In this way you can cultivate them both ways and save hoeing. Set the plants in April and May, and let them vine on the ground the first year. In the fall following setting, we would suggest a little manure applied around each plant. In the spring, they should be tied up to wires, just like grape vines. One-half pound of Sulphate of Ammonia applied to each plant early in the spring will cause them to produce these enormous crops. Good cultivation right through picking season will hold moisture. Start right by getting the Genuine Boysenberry plants from us. Our prices are right. 600 plants will set an acre.
